

Global Partner Pack 2018

**Competitive analysis & differentiators for the
edgescan™ platform.**

The Edgescan Approach

The Differentiators

- edgescan is an annual subscription **Software-as-a-Service; unlimited assessments; scheduled – on demand – invoked thru API** – it is an end to end vulnerability managed service and not a scanning tool that requires feeding and watering.
- Verified Results** = No False Positives. **Every vulnerability is verified** by edgescan security analysts across application & Host layer
- Custom testing profiles analyze every Web form**, business process, and authentication/ authorization component of applications / API's.
- Generate custom **reporting on demand to demonstrate compliance**, as well as management and technical reports. (ISO27K, PCI-DSS, GDPR, HIPPA etc.)
- An **open API** for easy integrations: IDS / IPS, bug tracking systems, ticketing systems, ITSM's, SIEM systems, GRC Platforms and Web application firewall (WAF) products. . .
- Consolidation** of vulnerability assessment and security testing intelligence into one vendor and one platform
- "Gold standard"** vulnerability & remediation support for both your security, developers and system admin teams. Reduced **MTTR** (mean-time-to-remediate)

High Level Comparative Analysis

Security & Vulnerability Management Market	Edgescan Managed Service	WhiteHat App Security	QualysGuard	IBM	Nexpose
Custom Feature Development	X				
Developer Support Included in license	X
