ENSURING YOUR INVESTMENT IS SECURE

Current merger and acquisition (M&A) activities may have a significant digital component as part of the investment.

Growth of the digital economy is still in full swing with no signs of slowing down.

Many high-growth businesses contain a significant digital property/platform which is key to business engagement.

Technical due diligence of such properties is key to any successful merger & acquisition or investment to help ensure the acquired company is on a technically strong footing.

Cyber security is of paramount importance when considering the digital economy.

Cyber security is a significant aspect to any merger, investment or acquisition of a digital business.

“Edgescan detected some serious weaknesses in the system we were about to acquire. The findings saved us a six-figure sum, highlighted compliance concerns and provided us with a deep understanding of the system’s quality. This information was invaluable to our technical due diligence efforts...”  - UK Private Equity Partnership, 2020
WHY IS CYBER SECURITY A CORE COMPONENT OF TECHNICAL DUE DILIGENCE?

✔ When investing in a business with a significant digital component technical due diligence (DD) is required.

✔ Core aspects of technical due diligence are cyber security posture, privacy and data protection.

✔ When conducting the DD process, what is needed is rapid verification which is accurate, simply understood and provides an element of support to move the DD process forward.

Edgescan delivers assurance the property you are investing in is robust, secure and compliant.

CYBER SECURITY RISKS TO M&A

✔ Privacy, Data Protection, Technical Quality, Technical Security are all important aspects of any system. With global legislation in different territories in relation to data protection (GDPR, NIS, CCPA etc) non-compliance can be costly, damage reputation and loose clients.

✔ Cyber security is now a board level topic. It’s high visibility and impacts the bottom line.

✔ Ensuring an M&A target is secure, robust, high-quality and compliant has never been more of an issue.
DEEP, RAPID, ON-DEMAND & EXPERT SUPPORT

Edgescan can deliver **accurate** cyber, due diligence **rapidly** on-demand.

Edgescan is a **fullstack** service which can assess networks, web, cloud and mobile apps.

The Edgescan service is a combination of **experience, expertise & hi-tech automation**.

Edgescan provides **deep assessment**, vulnerability **verification** and **risk-rating** of digital assets.
