edgescan™

FEATURE OVERVIEW

Continuous Controls Validation

Continuous compliance monitoring for real-world security risks.

Continuous control validation uses AI to analyze security policies, governance requirements and compliance obligations, such as OWASP ASVS, NIS2/CyFun, ISO27001, then automatically maps validated vulnerabilities against those requirements to identify policy breaches, control failures and compliance risk.

Gain continuous visibility into your security posture, improve audit readiness and understand where real world exposure is creating governance risk.

Traditional Compliance Monitoring	Continuous Controls Validation
✘ Point-in-time Audits	✔ Continuous compliance visibility
✘ Manual Policy Review Reviews	✔ AI-powered policy analysis
✘ Limited visibility between assessments	✔ Validated findings only
✘ Compliance evidence gathering is time consuming	✔ Ongoing control effectiveness monitoring
✘ Security and compliance teams operate separately	✔ Security and GRC alignment
✘ Control failures often remain hidden	✔ Evidence backed reporting

How It Works

Upload

Upload/link security policies, governance requirements and internal standards

Analyze

AI interprets controls, obligations and compliance require requirements

Validate

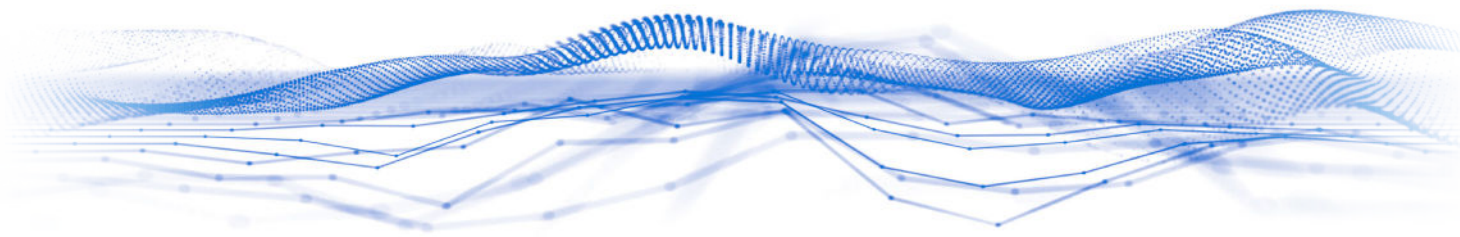
Validated vulnerabilities are mapped against policy requirements

Prioritize

Identify policy breach, compliance gaps, and governance risks

Report

Generate evidence back to compliance reporting and audit insights



Key Benefits

Continuous compliance visibility: understand compliance exposure across your environment throughout the year

AI powered policy intelligence: transform policies into measurable operational controls

Validated findings only: reduce false positives and focus on genuine compliance risk

Faster audit readiness: reduce manual evidence gathering and audit preparation effort

Better remediation prioritization: prioritize findings based on governance and compliance impact

Security and GRC alignment: connect vulnerability management, and governance risk and compliance objectives

Executive level visibility: provide leadership with meaningful insight into compliance exposure

What's Included

- Customer policy upload
- Compliance mapping
- Control validation
- Policy violation detection
- Governance risk identification
- Evidence based reporting
- Audit support
- Remediation tracking
- Validated findings integration

Ideal For

- Security teams
- Governance risk and compliance team teams
- CISOs
- Risk leaders
- Enterprises
- Critical infrastructure
- Organizations operating under multiple compliance frameworks

Compliance View

- Board-ready compliance posture reporting
- Demonstrate due diligence under NIS2 & ISO 27001
- Understand regulatory exposure at a glance
- Align security investment to control obligations
